OUTPUT ANALYSIS

Threaded BST Predecessor and Successor • Observed Program Output (Compile Result)

1. Program Run Summary

Menu options used in the run.

Operation	Input	Observed Output	Result
Insert (1)	15, 25, 45, 65, 55, 75	Inserted without errors.	**Success**
Inorder (2)	Option 2	15 25 45 55 65 75	**Sorted**
Verify (5)	Option 5	6/6 nodes matched.	**Pass**

2. Predecessor and Successor of Every Node

Minimum node has no predecessor; maximum node has no successor. Thread results matched the inorder sequence.

Node	Predecessor	Successor	Result
15	None	25	**PASS**
25	15	45	**PASS**
45	25	55	**PASS**
55	45	65	**PASS**
65	55	75	**PASS**
75	65	None	**PASS**

Interpretation: The inorder output is sorted and all 6 nodes passed verification (6/6), so the thread links give correct predecessors and successors, including the edge cases 15 and 75.
